DISEASES CAUSED BY DIRTY WATER

Dysentery

It is the name given to diseases that show symptoms such as frequent and bloody diarrhea in humans, usually severe abdominal pain, desire to defecate unnecessarily, and intestinal wounds.

Typhoid

Typhoid is a bacterial infection that causes high fever, diarrhea and vomiting and can be fatal.

Lead Poisoning

Lead contaminated water from old pipe can cause lead poisoning, one of the serious diseases caused by water pollution.

HEPATITIS A

It is an infectious disease caused by the hepatitis A virus, involving the liver and characterized by jaundice. Since it is spread with feces, unclean water sources and foods washed with these waters pose a great risk for the spread of the virus.

Diarrhea

The most common disease caused by water pollution is excessive and more frequent than normal, watery and loose stools.

Guinea Wolf Disease (Dracunculiasis)

It is one of the diseases caused by water pollution in Africa. People become infected with worms when they drink water contaminated with the larvae.

Malaria

It is a febrile illness caused by a mosquito carrying a parasite called Plasmodium that breeds in polluted water.

Trachom

Trachoma occurs in crowded settlements where water resources are limited and health service are inadequate. Transmission occurs through direct contact of patients with contaminated water, flies or the use of items such as towels and handkerchiefs.

"dirty water is,

a waste of our health!"

Fluorosis

This disease, which causes severe bone disease, is due to high levels of fluoride naturally found in groundwater.

**Apart from these, in relation to water
The following diseases can also be seen:**

- Giardiasis
- Yersinia Gastroenteritis
- Campylobacter Infection
- Viral Gastroenteritis
- Legionnaires' Disease
- Leptospirosis
- Onchocerciasis
- Schistosomiasis
- Dengue Fever and Dengue Hemorrhagic Fever
- Poisoning Due to Cyanobacteria Toxins
- Fluorosis
